

MAKING
EVERY DROP
COUNT

Water Wise Solutions for Municipalities

Agriwater is a sustainability technology company specializing in water treatment technology. Our focus is on enhancing water quality and irrigation efficiency, which leads to:

Water savings of 20% or greater

**Scalable and adaptable to existing
irrigation systems**

Potential reductions in input costs

The Responsibility of Managing Water Resources

In today's world, the importance of saving water has never been more critical. As our population grows and climate change alters weather patterns, municipalities face increasing pressure to manage water resources sustainability. Municipalities are responsible for a vast array of irrigation needs, ensuring that sports fields, golf courses, public spaces, cemeteries, public gardens, green belts, and municipal parks are properly maintained.

By adopting water-saving practices and investing in efficient irrigation technology, municipalities can significantly reduce water usage while keeping these spaces vibrant and healthy. This responsibility helps ensure a reliable water supply for current and future generations, protects our environment, and saves money on infrastructure.

Agriwater Committed to Being a Part of the Solution

Agriwater understands the pressure on municipalities to preserve water and implement sustainable solutions for our community's well-being. We are committed to being a vital part of the solution. The Agriwater system reduces water use by 20% or more, exemplifying innovative solutions that make a significant difference.

Agriwater's focus is clear: to enhance the quality of irrigation water, leading to significant water savings and reduced input costs. With over 4,000 system installations globally, the Agriwater water treatment system has been researched and proven where it matters most: on commercial irrigation systems. Over 16 years in operation, the Agriwater technology has proven to deliver cleaner, more efficient irrigation systems and superior water quality.

With Agriwater technology, every drop of water counts, making a tangible impact on sustainable water management.

Municipality Value Propositions

Water Savings of 20% or Greater

Agriwater treatment generally reduces irrigation water requirements approximately 20%. Reductions that are in excess of 20% can be achieved through more efficient storage of natural rain water. See our *Consolidated Water Conservation Data* document.

Watershed Protection

Protecting our watersheds is a key component of sustainability. Agriwater effectively mitigates salinity in runoff. See our salinity documentation.

Fertilizer Use Reduction

Aerobic soil environment reduces chemical fertilizer need.

Mechanical Aeration

Reduced or eliminated (compaction is relieved by irrigation).

Drought Resistance

Increased soil water holding capacity and reduced permanent wilting point together with increased turf health improves drought resistance.

Playability and Aesthetics

Turf in athletic parks becomes more resilient as compaction is relieved. Increased health and root growth give a consistent, healthy look to green areas along with trees, shrubs, and other landscaping.

System Maintenance

Biofilms reduced or eliminated, prevention of scale or precipitation formation, sprayer uniformity restored, filter and sprayer cleaning reduced or eliminated.

Deep Watering

Improved hydraulic conductivity and water infiltration and distribution rates facilitates the incorporation of longer wetting cycles to manage root zone characteristics.

Microbial Life

Support of aerated soils and dynamic moisture and nutrient movements by Agriwater improve diversity and relative abundance of beneficial soil microbes.

Wetting Agents (turf applications)

Reduced or eliminated (increased infiltration rates, viscosity reduction in treated water).

Achieve Environmental Goals While Maintaining Economic Sustainability

At Agriwater, we are committed to helping municipalities improve their water footprint by reducing water requirements by over 20%.

Why Agriwater Technology?

Economic Sustainability: Our innovative solutions provide an economic advantage that can reduce costs, for example, our returns on investment, often within just golf course applications, where savings are substantial enough to cover system costs swiftly, often within just a year or two.

Environmental Impact: Saving water is paramount in irrigation sustainability, and Agriwater technology leads the charge.

Municipal Investment: Cities with environmental or climate action funds may be accessed to offset capital costs.

Make a Difference Today

Partner with Agriwater and take the next step towards a more sustainable tomorrow.

Contact us to explore how our technology can align with your municipality's sustainability goals.
