Testimonials

Gert van Rensburg – Graceland Hydroponics, Brits

“What remains very remarkable is the improvement in growth. The plants grow faster and more vigorously than previously due to improved root systems. In addition, not nearly as many plants perished as in the past....”

Sean O'Connor – Bloemendaal Kwekery Floral Farm, Ballito

“We installed an RainBox during May 2011 and within only 3 months we noticed an increase in flower size, stem thickness and number of petals, as well as number of stems. Upon removing the plants from their pots, one could observe improved root growth, with new root development on old plants - This in midwinter!”

Henk van Zyl – Swellendam

In 2009 he heard about RainBox for the first time listening to a presentation by Riaan Kirsten. He however remained sceptical about RainBox's claims. Later in the year he visited Namibia and during the visit he again heard about RainBox's results obtained by a farmer in the Tsumeb district. To satisfy his curiosity he went to have a look himself.

Koos Burger – Kolet Boerdery, Kakamas

“The grape vine-growers cannot believe that 40 to 80 tons are harvested from one hectare of two and a half-year-old grapevines. At harvest time I had to purchase an extra 1 000 raison-nets for drying the grapes! My flood- irrigated vineyard which I wished to dig out as it was planted in 1956 and no longer produced, recovered remarkably within two years.”

Werner du Plessis – Goosen Boerdery & Denou Farming, Ceres

“The installation of 3 RainBoxe’s contributed to an increased percentage of our butternut export. The butternuts were more uniform, and the plants recovered significantly faster after very high temperatures... I am pleased to share my success with your organization!”

Attie Scholtz – Vaallus, Douglas

Agri SA Toyota Young Farmer of the Year 2013

“For me it is important to always look for new technologies that can sustainably increase my profitability in the long term. The RainBox is successful in achieving this...”

Errol Hewson – Penhill Farms, Addo

“It took 6 - 8 hours to increase the subsoil of my orchards under drippers to field capacity. The filter had to be cleaned once a week and the drippers twice a month due to blockages. After five months of RainBox treatment, it took only four hours to water the subsoil (350 mm). The filter and drippers are now only inspected every two months!”

Renier Smit – SRCC Development Trust, Kirkwood

“An average of 8 - 10 workers were needed to inspect our dripper lines for blockages. After the RainBox installation we needed only four laborers. This after 12 weeks. The trees also yield more uniform flowers and fruit.”

Dave Gerber – SRCC, Addo

“My irrigation systems are much cleaner since the RainBox installation. I also noticed a more uniform flowering period and the trees are looking healthy.”

Marius Ferreira – Nulandis, Kirkwood

“We usually found at least 16 blocked micros on an irrigation block – now only two or three. The inspections of the blocks are a lot quicker and need less labour. Our lemons are looking fantastic.”
